America's infrastructure is currently falling apart all around us. The Army Corps of Engineers estimates that the United States of America must spend $4.5 trillion by 2025 to fix our failing infrastructure. This bill puts money aside to do.

IN THE SENATE OF THE AMERICAN LEGION BOYS NATION

Mr. Holden of Delaware introduced the following bill;

A BILL

America's infrastructure is currently falling apart all around us. The Army Corps of Engineers estimates that the United States of America must spend $4.5 trillion by 2025 to fix our failing infrastructure. This bill puts money aside to do.

Be it enacted by The American Legion Boys Nation Senate assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "American Infrastructure Revitalization Act (AIRA)".

SECTION 2. To aid in repairing America's failing infrastructure, funds will be set aside for the fiscal year of 2020 and given to specific departments with the instructions to "repair and revitalize" their specific area of infrastructure to the best of their ability. The specific amount of funds given and the department they are given to is as follows:

- $200 Billion dollars is to be given to the United States Environmental Protection Agency and their
Office of Water waste Management to repair America's Water Waste Infrastructure. This Department is given the duty of using said funds to pay for construction and repair of their area of infrastructure.

- $50 Billion dollars is to be given to the United States Department of Energy to revitalize and revolutionize America's Energy consumption and Sources. This $100 Billion is meant to create 10 "Solar Farms" within the Northern, Western, Southern, and Eastern sections of the United States. Along with this, the $100 billion is also meant to repair any damaged oil pipelines currently within the United States.

- $50 Billion Dollars is to be given to the United States Department of Transportation to not only add new Transit Lines but to also repair current transit lines.

- $200 Billion Dollars is to be given to the United States Department of Transportation to repair America's failing roads as, on average, one out of every 5 miles of road is in poor condition. These funds can be used for such things as funding Transportation Departments on a State Level.

-$30 Billion Dollars is given to the United States Department of Education to repair and revitalize certain facilities within our schools. While the majority of these funds will go towards the repair of specific facilities, $1,000,000,000 will go towards gathering comprehensive data on the conditions of our schools in terms of its infrastructure.

- $10 Billion Dollars is to be given to the United States Department of Energy Incase of any immediate concerns that may appear. For these funds to be used the Army Corps of Engineers would have to suggest the "immediate attention" of the government towards a concern. If these funds are not completely used by the end of the year 2020 (December 25th 2020), then they will be allocated towards a separate entity that will be determined at that time.

-For any funds not spent from this allocation will be used to reduce the deficit.
